

INTRODUCTION				
The following is a list of TOPS Locomotive Pool Codes which can be used in conjunction with the locomotive stock changes in the "Railway Observer" which is published monthly by the Railway Correspondence and Travel Society. There are a number of codes which are still "live" on the system but have no allocation and are unlikely to be used again. Finally, two ghost pools (DXXB and DXXC) are on the system; these, together with a number of ghost locomotive numbers, are only used for staff TOPS training purposes.

INTRODUCTION					
Some class 01/5 locos are TOPS registered in pool MBDL but have been "off-TOPS" for several years, some others have been deregistered (see notes)					
All others were allocated RSL numbers, but never registered on TOPS					
Up-to-date information on location and livery can be difficult to obtain; if you have any such information please advise ourlocos@rcts.org.uk.					
Note that locos reported below as at LH Group, Barton-under-Needwood may have been moved to the Chasewater Railway					
Locos in MoD purple and white are branded DLO, the acronym of the Defence Logistics Organisation					
Where no livery has been reported for MoD locos, it's probably purple and white; some may be named

INTRODUCTION				
The following numbers have been issued by the Rolling Stock Library (RSL) for privately owned diesel and electric locomotives for situations where the original TOPS number has been reused. The third digit represents the power classification and the last two digits are the final two digits of the pre-TOPS number, except where duplication occurs. The only exception is 89212 LUL 12 Sarah Siddons. Not all the preserved/privately owned locomotives are included in the series.

INTRODUCTION						
The following numbers have been issued by the Rolling Stock Library (RSL) for privately owned steam locomotives.						
The third digit represents the power classification and the last two digits are the final two digits of the historic number, except where duplication occurs. A number of locos have been registered on the RSL for the transfer to or from a location where road access is difficult and therefore there may be the need for a short shunt by rail, e.g. Didcot Railway Centre and Eastleigh Works. It should be noted that there are a number of preserved "Industrial Locomotives" which have been added to the RSL.
